Dating App For a German Entertainment Startup

Zefir

How rolling out a date application with a broad range of features from searching for the nearest users and photo ratings to VoIP for making private calls and calculation of compatibility helped a Berlin-based entertainment startup attract the first users in the local market and raise **€11m** for further development.
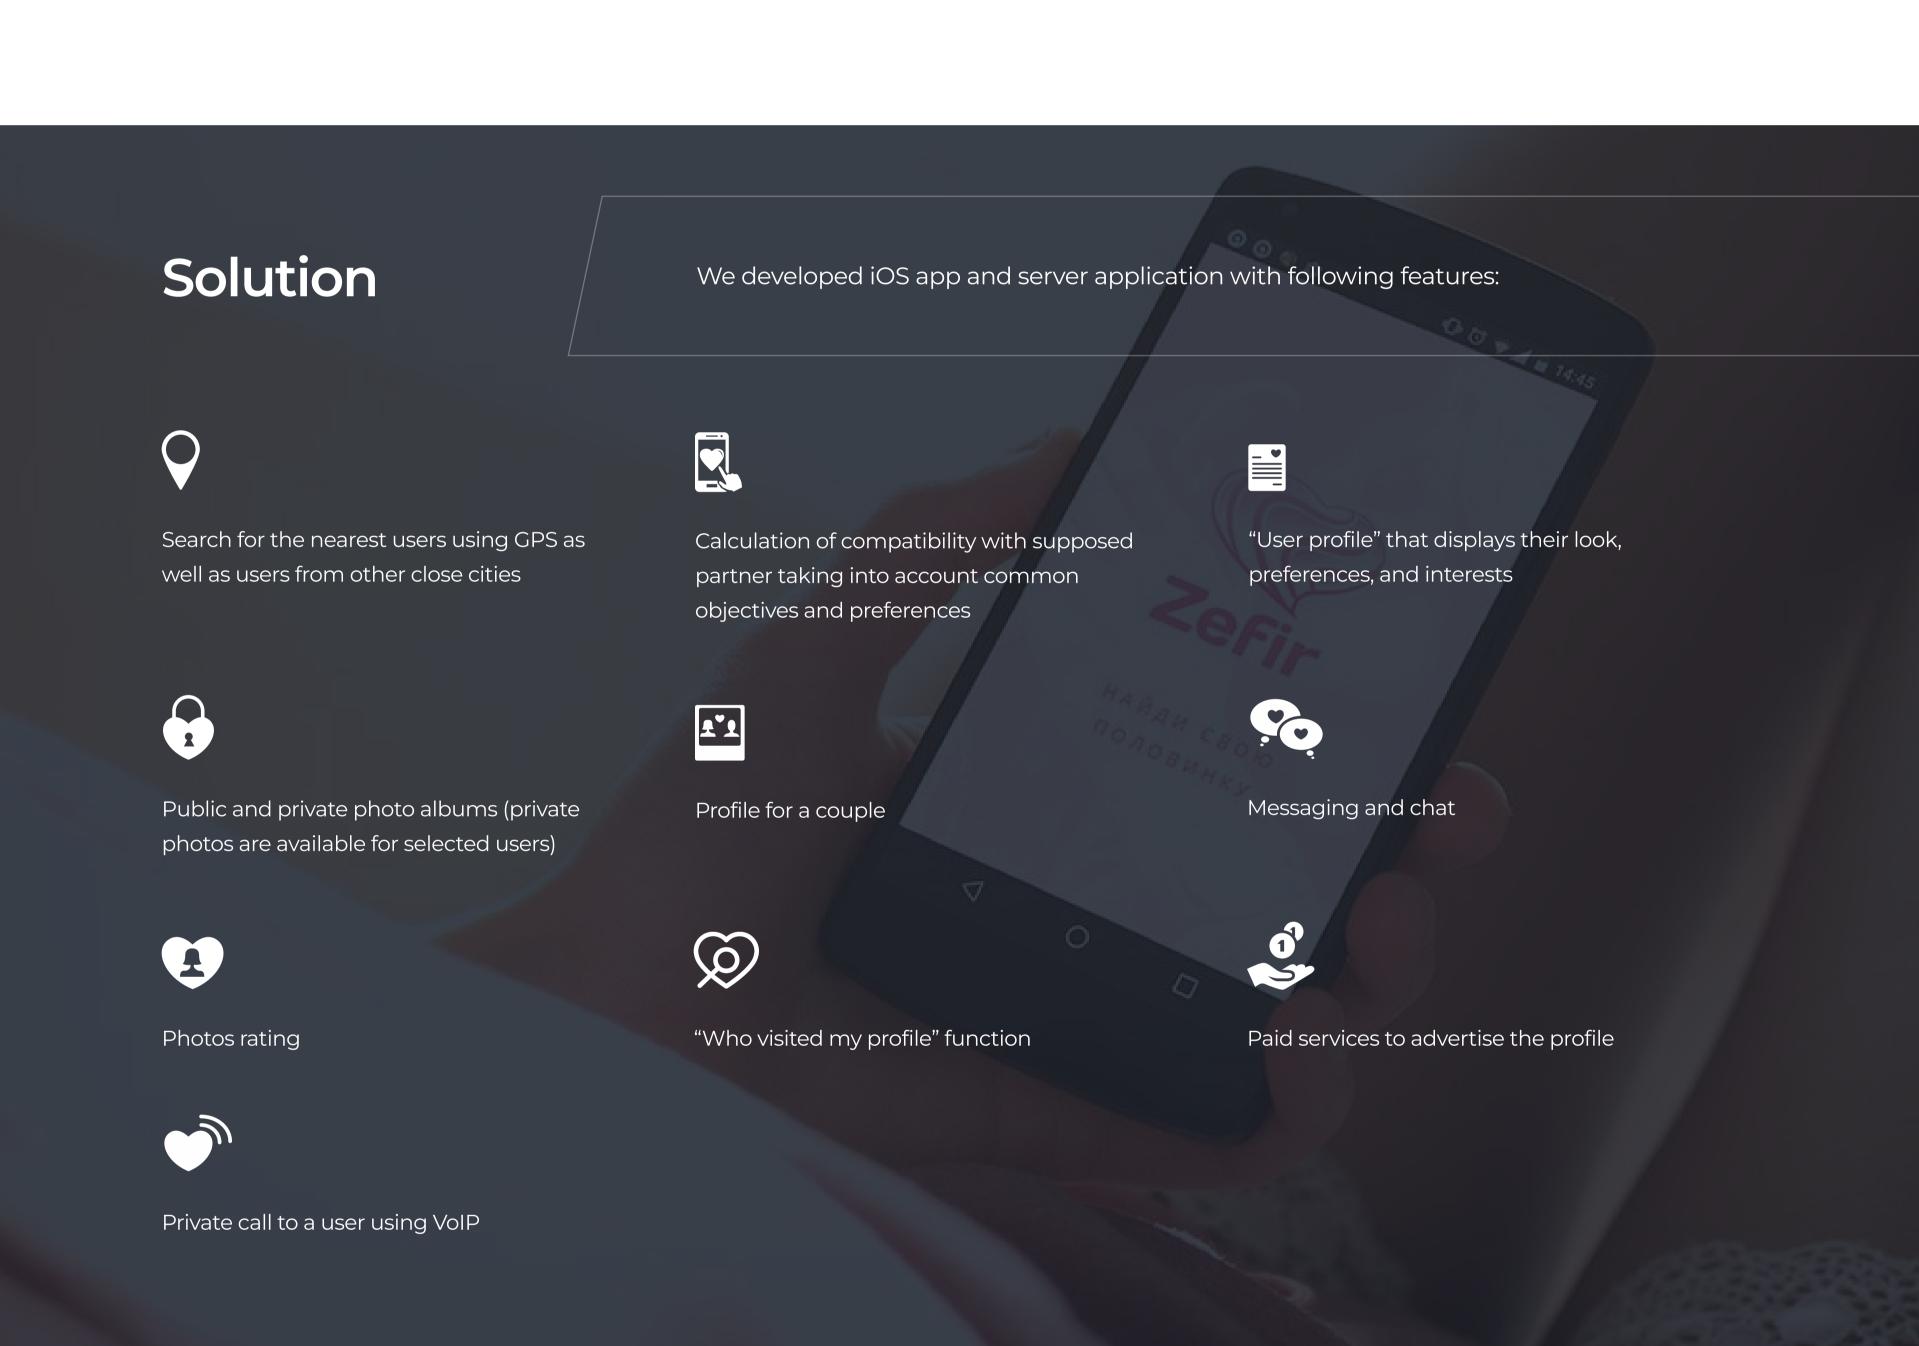

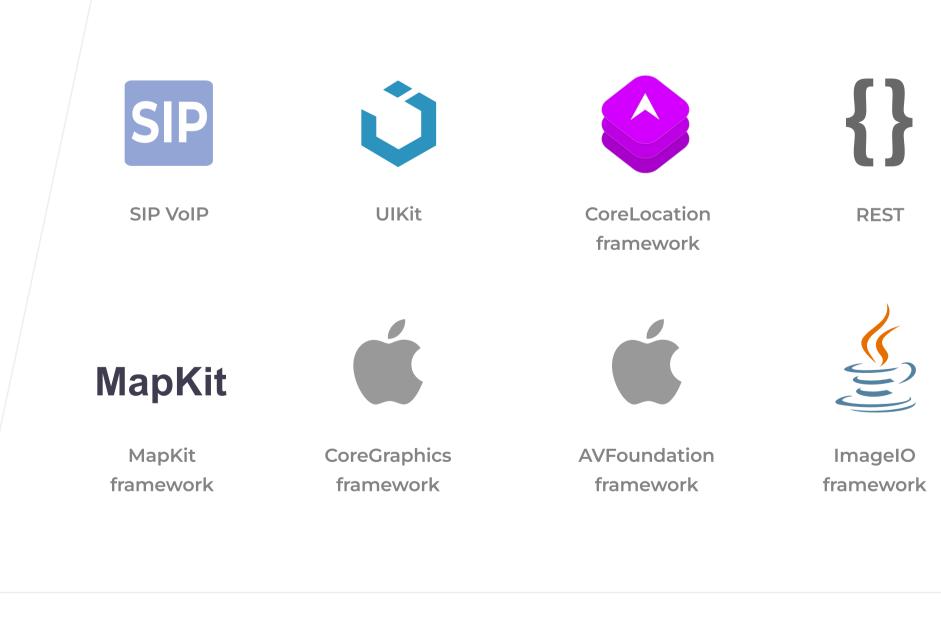

Task

More and more people use services and apps for establishing connections and communicating today.

Differential features:

- you can make a confidential direct call to another user using VoIP technology
- this app should also include the most services that appear in the similar applications.

Solution

We developed iOS app and server application with following features:

- Search for the nearest users using GPS as well as users from other close cities
- Calculation of compatibility with supposed partner taking into account common objectives and preferences
- "User profile" that displays their look, preferences, and interests

- Public and private photo albums (private photos are available for selected users)
- Profile for a couple
- Messaging and chat

- Photos rating
- "Who visited my profile" function
- Paid services to advertise the profile

- Private call to a user using VoIP

Technologies

- SIP VoIP
- UIKit
- CoreLocation framework
- REST

- MapKit framework
- CoreGraphics framework
- AVFoundation framework
- ImageIO framework
