

# Reporting System For a European Construction Corporation

How implementing a reporting system with interactive analytical dashboards provided a construction enterprise with a **comprehensive real-time overview of crucial company data**, such as staff efficiency, workload statuses, current projects' stages, incident rate, etc.

## Challenge

It was required to provide the software which would collect data and inform heads of construction about:

- efficiency of the employees
- labor costs on certain sites of works
- plans of works on construction sights

## Solution

The software package is developed for heads of works on construction sights. All objectives can be carried out by means of iPad. The mobile application was integrated into an existing control system of company projects. Also possibilities of viewing of construction plans in the SVG format were added.

## Technologies

Cocoa Touch API,  
UIKit framework

HTML5
